# ANNOTATION

The idea of creating a cryptocurrency for agriculture and animal husbandry with the support of precious metals and the benefits of being involved with the community was born in our company in late 2017. The actively developing blockchain technology and a dynamic cryptocurrency market could not but turn our attention to this field.

At the time of 2018, the main problem of the cryptocurrency market was: the limited number of trusted platforms that offered definite benefits for cryptocurrency products. Lack of service and many other problems - pushed us to start developing our own platform that was more profitable by involving gold in the process

Our team members are experts in trading in the financial and cryptocurrency markets, who have years of experience in working with global brokers. Understanding the market of agriculture, fisheries and digital asset trading as well as the experience gained from within in asset management financial institutions and banks, urges us to come to the blockchain field which will provide more benefits

The development of the BBCC- CRYPTO smart contract platform is one of our most ambitious projects yet. The creation of the platform began in 2017. From the very beginning and till the release of our platform, a lot of technological issues were studied and solved, which allowed us to refine our system and create an ideal concept of the crypto exchange of the future and let traders make their profits in a comfortable and accessible environment

# THE PROJECTS

## **BBCC- Crypto Platform**

Our team created the BBCC-CRYPTO community development in order to develop the best service for trading cryptocurrencies and also agriculture and animal husbandry base on gold Primary processing is carried out by means of a centralized system - that is, at facilities that ensure the uninterrupted stable functioning of the Exchange, and then - the information is sent to our private server for backup. Also, as an additional protection, in the future, cloud storage and the method of data storage in a distributed ledger with the help of blockchain technology will be used on the Platform.

Backup applies to all data categories. Safety of our users' money is guaranteed by the method of storing it on cold wallets. In matters of decentralization and centralization, we use a modern technological combined system. For example, the storage of personal user data is feasible within a centralized system and there is no sense in uploading all the data to the blockchain, thereby creating an unnecessary load on the network at the cost of reducing the processing speed. It will be enough to enter the results of transactions in the form of hash codes into the blockchain.

We defined our development strategy based on empirically acquired knowledge and on the analysis of the work of existing platforms. We spent a lot of time, effort and money developing the BBCC-CRYPTO platform, faced many challenges and solved many technological issues during its creation, this allowed us to develop a trading and payment platform that

fully meets the modern market requirements and high modern technological standards of speed and safety.

### **Features of the BBCC- Crypto Platform**

The BBCC-CRYPTO exchange offers a large number of trading and payment instruments, a list that will continue to be expanded, providing the tools needed for professional traders and novice users for all types of livestock and plantation entrepreneurs with guaranteed monthly gold profits

The availability of fiat currencies is not a universal option on crypto exchanges. We offer a solution to this problem. The BBCC-CRYPTO Exchange has been actively working to connect and facilitate agricultural and plantation actors that will allow you to withdraw funds in the traditional way or by using the internet, and directly use them to trade in various places that have become our members. Currently, BBCC-CRYPTO works with the main fiat currencies: USD, EUR, IDR, and the most attractive cryptocurrency like Ethereum.

Our company has incorporated a transparent reporting system in the concept of the platform of the future. Our clients will have a detailed statement of all the operations performed.

We will provide full information about all transactions, commissions and debits of funds from the user's balance. These reports can be generated by clients at their own request in the corresponding section of the personal cabinet; they will be endorsed by our company and can serve as an official document provided to public authorities and various financial institutions

## Exchange Technologies

### Security of data transmission:

Our team seriously approached the issue of safe storage and data backup, ensuring the maximum level of protection of transmitted data. Security of data transmission is provided by two factors:

Using SSL as the main layer for data transfer;

Application of http/2 technology on the server side increases not only performance, but also a level of security.

We use only complex keys for internal data transfer, the whole transfer within the infrastructure is carried out with using RSA encryption (US Pat. No. 4,405,829) Security of Logging In is provided by two levels of verification:

### Verification of user data by authorization

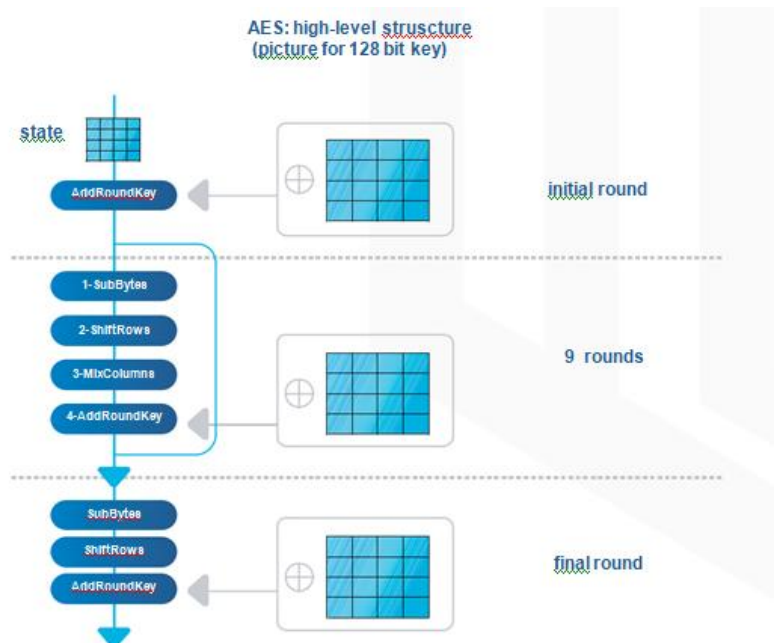

Signature is a HMAC-SHA256 encoded message containing nonce, customer ID and API key. The HMAC -SHA256 code must be generated using a secret key that was generated with your API key. This code must be converted to it's hexadecimal representation (64 uppercase characters).

### Abstraction of the method of hashing passwords:

The present invention is a device for and method of generating a hash value for a message by padding the message, loading the padded message into a first shift register that generates values according to a first rule of motion, initializing eight registers a, b, c, d, e, f, g, and h with user-definable values; converting the contents of the registers to:  $h_j = g_{j-1}$ ;  $g_j = f_{j-1}$ ;  $f_j = e_{j-1}$ ;  $e_j = d_{j-1} + T1$ , where  $T1 = h_{j-1} + \sum 1(e_{j-1}) + Ch(e_{j-1}, f_{j-1})$ ,

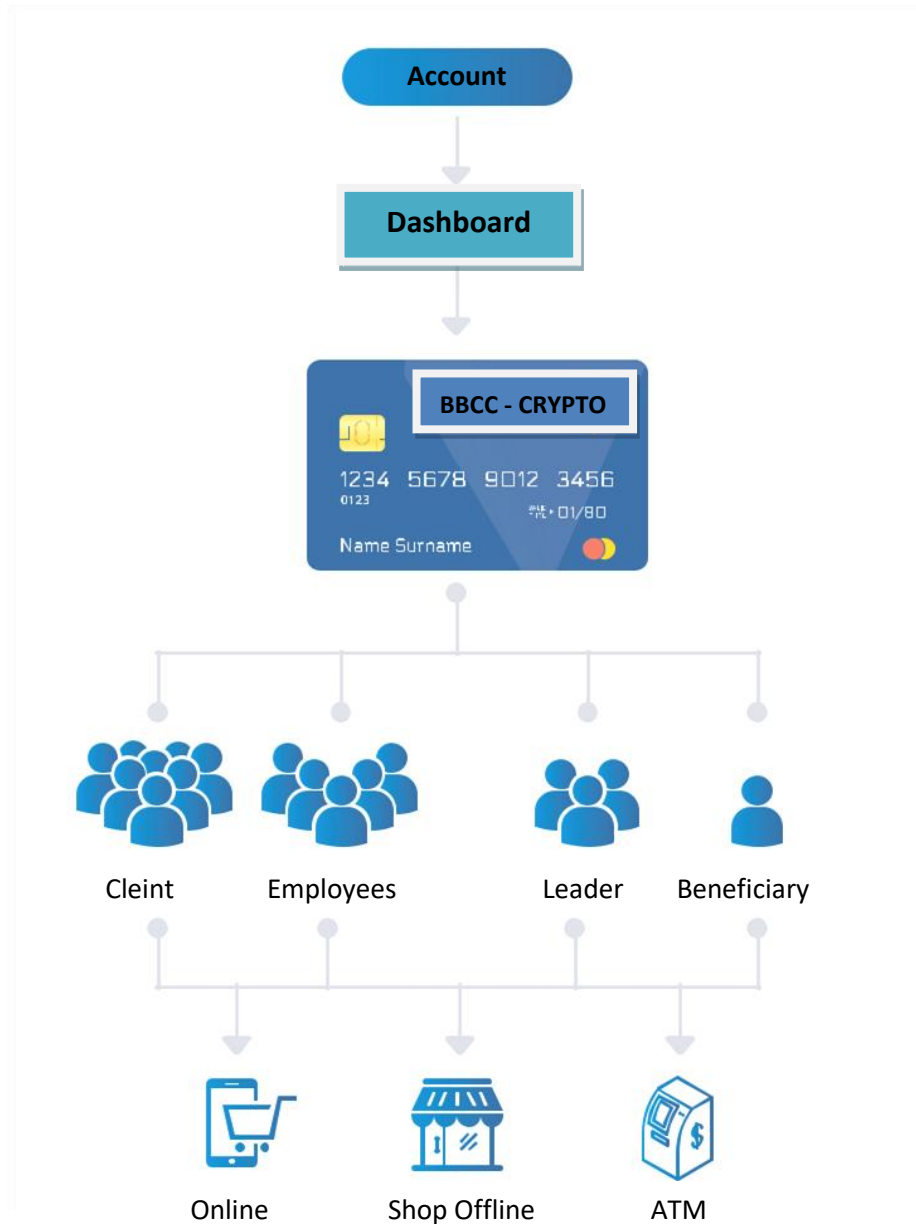

$$\begin{aligned} H1(j) &= a + H1(j-1); & H2(j) &= b + H2(j-1); & H3(j) &= c + H3(j-1); \\ H4(j) &= d + H4(j-1); & H5(j) &= e + H5(j-1); & H6(j) &= f + H6(j-1); \\ H7(j) &= g + H7(j-1); \text{ и } H8(j) &= h + H8(j-1); \end{aligned}$$

To ensure the highest possible level of security for our clients, we addressed the issue of improving the quality of data storage. For this purpose, we are developing a combined decentralized system.

## We create a structural product that will include:

- proprietary Multi Wallet;
- issuance of payment cards linked to the balance of our users accounts;
- creation of cryptocurrency merchant-accounts for companies willing to provide their clients with the opportunity to make payments

# ICO

## BBCC Token

Becoming the owner of BBCC Token, you also become a member of the BBCC Community, which gives you the right to enjoy a number of privileges: participation in decision-making concerning aspects of further development of the platform through open voting, participation in loyalty programs, free access to increasing the level of the payment card; also participants will receive various bonuses from our company and will be quarterly remunerated with money rewards.

BBCC Tokens are digital cryptographic tokens based on the Ethereum protocol technology and comply with the ERC20 standard (Security update 2019) and serve as a software digital product. The BBCC Token assigns the owner the right to receive a proportionate amount of BBCC Coins.

BBCC Coin is a form of digital cryptographic asset that the Company will issue after the completion of the ICO, and which in the future will be listed on the exchange in accordance with the requirements of the law.

BBCC Company will form a community support fund that will attract more and more participants to this platform. Our company will be transferring 25% of the total revenue made by BBCC -CRYPTO ecosystem to this fund.

Growth in the revenue of the ecosystem will mean the growth of payments to members of the community, and also lead to an increase in the cost of the coin itself.

## **The advantages of owning BBCC Token**

1. The owner of the BBCC Token is a Member of the community
2. Members of the community quarterly receive a part of the company's income in the form of divedends
3. Participation in decision making in the lift of the company
4. Automatic participation in lyalty program
5. BBCC payment Debit Card
6. The right of Cryptocurrency on the platform

## **Guarantees of income**

All accruals to the fund will be recorded in the blockchain, which will provide transparency of information about the state of the fund, guarantee timely payments at the rate of 25% of the company's income, ensure equality in the distribution of profits. Payments will be made quarterly in the BBCC Ecosystem.

The charging mechanism will be implemented as follows: On the day of payment, BBCC Coin holders will be credited with the equivalent amount of payment coin – BBCC, which will be accrued on their personal account and, in the future, to the multicurrency wallet. This coin will have a fixed price, which will be determined by the sum of all accruals to the fund for the quarter, divided by the total amount of BBCC Coins.

You can exchange it for traditional currencies, other cryptocurrency in our system or use it to make purchases in our Ecosystem. All BBCC that have not been realized within a month will be automatically purchased from members of the community on a «buy back» basis, and they will receive a reward in their personal multi wallet. In such way community members receive a lifetime passive income.

BBCC Coin will be put into turnover after the completion of the ICO. There will be no possibility of creating new coins in the future.

The emission will be 10,000,000 BBCC Coins. Limited emission and constant development of the project leads to an increase in the cost of the coin.

### **Token sale plan and bonus program**

BBCC Company will issue 10 million BBCC. Throughout the ICO, BBCC Token will have a fixed price of \$ 1. Those who buy our token on the early stage will be rewarded with a bonus number of coins. The selected model allows to save the initial value of the coin and does not lead to its fall after the completion of the ICO.

In total, 12.6 million tokens will be sold during the ICO, which will account for 60% of the total number of tokens. The bonus depends on the amount of tokens sold during the ICO, and within the ICO timeframes, an additional number of IGT tokens will be paid for the completion of the temporary tasks from BBCC Company.

10% of tokens will be distributed among investors as bonuses for the purchase of tokens during the ICO. 10% of the tokens will be distributed between the team that worked on the creation of the project. 15% - Company's Development Fund. The Company plans to keep 3, 150, 000 BBCC Coins in the Development Fund, which will not be sold by the Company during the ICO, and their management will be carried out by the Company's Board of Directors and an external controller - an invited adviser. The Company declares that the specified funds in the Company's Development Fund will be frozen for a period of at least 3 years, and can be used exclusively for the Company's development projects. 5% - the Company will allocate for advisers, PR-program and marketing.

Also for the most active users of our platform our company provided a referral program that allows you to receive an income of 6% of the purchases made by referrals.

**The collected funds will be used for the development and maintenance of the project as follows:**

15% – Administration

No product is complete without a team whose goal is to provide a high level of service to work on the platform and handle customer requests as soon as possible. This item of expense is aimed at further attracting the best industry experts to work on the project, expanding the staff of support departments, compliance, fund movement department, technical support, expanding the number of languages of customer service, and the formation of a payroll. Opening of additional offices and their equipment.

**15% – Marketing and promotion**

A significant part of the budget involves advertising and promotion expenses. Since BBCC - is its users. The growth of the audience is one of the main priorities for the near future. A team of experienced professionals that have a clear understanding of the project development will ensure a stable growth of the audience, due to a thoughtful marketing strategy and PR campaign. Marketing costs consist of such areas as: Media PR (paid materials in the media, bloggers, reviews, press releases), E- mail marketing, targeted advertising, contextual advertising, banner advertising, referral program.

The purpose of the BBCC marketing campaign, in addition to increasing the number of traders, is to access the professional blockchain audience in order to gather the best specialists in the industry around our project. As a consequence - the creation of the most professional blockchain community.

### **10% - Legal support**

Obtaining of licensing documents, as well as the creation of a stock exchange liability insurance fund.

This is necessary for the introduction and business management in the chosen direction of issuing cards, providing merchant, legal support and attestation, as well as guaranteeing the exchange's responsibility to investors.

### **25% - Technical development.**

The expense item aimed at expanding the functionality of the platform and the development of the BBCC project.

Development of a «trading Web platform of the future» in accordance with the project charter compiled by our team, in order to expand the functionality, including the development of a multi- currency wallet.

Development of the desktop trading application. Development of merchant accounts and their implementation in the platform. Strengthening the server infrastructure. Along with the planned growth in the number of users and, as a consequence, the growth of trade volumes, the third stage

includes increasing the capacity of computing equipment for processing all operations and requests.

The server infrastructure of the company is the heart of the business. Servers and their performance are at the heart of most of the BBCC-CRYPTO's internal IT processes, from email to industry-specific business applications. Naturally, uninterrupted work and constant availability is what we will provide first of all at the stage of company's growth.

Improvement and constant technical updating of our own powerful server-based infrastructure allows BBCC-CRYPTO to handle a large number of requests. Also, the upbuilding of additional computing capacity is the stage of preparation for launching merchant accounts for trading platforms, multi-currency wallet and other BBCC projects that are being developed.

### **35% – Liquidity and Margin Trading**

The proceeds from the sale of tokens will also go to the liquidity fund for the listed coins and creation of a margin base - the purpose of this expense item is to provide customers with more technical trading opportunities. Liquidity - will allow our clients to hold quick trading operations at the most favorable rates, close to market prices. Margin trading, along with to the possibility of trading with leverage, implies the possibility of opening positions for sale, even if one doesn't have any trading instrument, which significantly increases the trading opportunities of our customers on the platform.

## Form of ownership

- PT Dinar Khalifah Indonesia Atjeh

## Legitimacy of business

IZIN PERUSAHAN

## Company management

Project development team;

## Owners

Bang Rahmad

Project development team;

## Dividend payments to owners

Annually (by decision of the founders, the payment period may be changed).

## **Attitude to investments**

Investments are the Investor's contribution to the Company through the purchase of tokens that entitle the investor to receive part of the Company's revenue;

## **Business management**

The investor does not directly participate in the management of the Company, but has the right to be notified of all decisions in the Company and the right to a consultative vote on the Council of Directors of the Company;

## **The role of the Investor**

The role of the Investor is to invest funds, the role of the team is to develop the BBCC-CRYPTO Exchange, and also manage the Company at every stage of its development;

## **Time frames**

Our plans are not a dogma, but our guidelines for development. Adjusting the plan is a natural process. The problem is not in the presence of adjustments to the development plan, but in their importance in the context of the ultimate goal - the creation of a highly profitable and systemic business on the cryptocurrency market;

## **Consolidation of agreements**

The trust to each other and the legal execution of any agreements do not contradict each other.

## TEAM AND EXPERIENCE

Our Experience -- is our team

| Our experience — is our team |  |

## **We are responsible to the investor, client, society**

We are fully aware of our responsibility to our clients and investors, and also understand all the risks that accompany cryptocurrencies investments.

That is why BBCC-CRYPTO already meets all modern requirements of the data storage security and execution of transactions. Our obligations to investors are public and legally enshrined by the rules of our exchange. Our professional responsibility to clients and investors will be insured - today we have already developed an insurance mechanism for our risks to investors and users, which will provide compensation for damage in case of an insured event.

BBCC-CRYPTO is a socially responsible project that supports the idea of responsible business and regards it as an important component of the activity of any company. Projects of corporate social responsibility are an integral part of the activities of our team.

We decided to focus on three key areas in which we have the professional knowledge and experience necessary to positively influence the future of the crypto community:

1. We take an active part in initiatives to improve the legislative framework that promote the development of cryptocurrencies and the observance of the rights of crypto investors;
2. We constantly raise the ethical and professional standards of the crypto business - we firmly believe that a systemic ethical approach to the management of the crypto business, our honesty and openness to our customers - contributes to strengthening our company's leadership;
3. We strive to be a crypto exchange, attracting and developing talents, creating a favorable working atmosphere and encouraging the constant development of the crypto community.

We set ourselves the goal of becoming a technological mediator between the classical economic model and the cryptocurrencies ecosystem, providing a fast and secure connection between all the participants.

We are at the root of the formation of a new understanding of financial relations between people.

The BBCC platform is built on the principle of universality, covering the interests of various groups, providing a versatile service and all the tools necessary for comfortable work, bringing the standards of safety to a whole new level.

## **We are on the way of legalization of Cryptocurrency**

Cryptocurrencies are now in the legalization stage. We are ready for this and appeal to the best advisors in this field. Constantly monitoring all the changes in the regulation of crypto-market (in the ID, US, EU and in the East), we are already moving towards legalization, understanding the need to meet the requirements of regulators in the future.
